TITLE: Method of and system for installing a computer program

Application Filing Date (1):
19980701

Priority Application Date (1):
19961218

Detailed Description Text (114):
In the course of installing a computer program in a computer to thereby adapt the
environment of that computer, the installer of the present invention is configured
to automatically create a procedure for returning to the former environment of that
computer before the computer program was installed. For example in the
configuration of FIG. 4, when the user of the PC 411 starts the install process of
the program 1 using the installer 405, the installer 405 automatically creates a
procedure for returning the environment of the PC 411 to the former environment
before the program 1 was installed, and thereafter, when the user of the PC 411
executes an uninstall process of the program 1, it is arranged to automatically
return the environment of the PC 411 to the former environment in which the program
1 was installed according to the procedure created earlier.
